

The people of Kuwait have in the past depended almost entirely on the sea trade giving its boat builders and sailors a good reputation. Plants in Kuwait were valued only as forage and fodder and for subsistence-level farming. Although oil was discovered in 1938, production of oil did not commence until after the second world war. Coupled with recent unrest in the region, extensive damage has been caused to many of Kuwait's plants and a good review of information on them became necessary. The book contains information on all of the dicotyledonous plants (except the Compositae) known to grow in Kuwait. Many of the species of plants are reviewed in their traditional uses in Kuwait and elsewhere. Extensive searches of scientific literature were carried out on phytochemistry, pharmacology, contemporary economic value of the plants. Brief notes are also provided on the utility of related species. The distribution of the 118 species covered is illustrated on maps of Kuwait and the Middle East.

Fontamara (Signet classics), Zippo: The Great American Lighter (Schiffer Book for Collectors), The Story of the Gravelys: A Tale for Girls, THE TROJAN HEARSE, Travels in Palestine (v.1): through the countries of Bashan and Cilead, east of the River Jordan; including a visit to the cities of Geraza and Gamala, in the Decapolis, What a Woman Must Do, Barrington Hospital, Deja, Report from Planet Midnight (Outspoken Authors Book 9),
